

January 14, 1955

Dear Dr. Demarec:

Thank you ~~very~~ much for the lysates just received. They appear in excellent condition except that the vials for ad-D11, ath-A2, and me-E2 had caps with no or defective liners, and the contents escaped. I would not trouble you for replacements as the bulk of the material will do very well for our preliminary trials.

Yours sincerely,

  
Joshua Lederberg
